

YOUTUBE HOMEPAGE CLONE

Submitted by: Kanika Negi

Project Title:

YouTube Homepage Clone

Objective:

The objective of this project is to recreate the user interface of YouTube's homepage using HTML, CSS, and JavaScript. The project demonstrates front-end development skills, responsive web design, and JavaScript functionality.

Technologies Used

- HTML5
- CSS3
- JavaScript

Project Features

- Responsive YouTube-inspired interface
- Fixed navigation bar
- Sidebar navigation menu
- Search functionality
- Video card layout
- Category filter buttons
- Hover effects and animations
- Mobile-friendly design

Project Structure

YouTube-clone/

```
|  
├── index.html  
├── style.css  
├── script.js  
└── README.md
```

Implementation

HTML

Used HTML to create:

- Navigation Bar
- Sidebar Menu
- Search Section
- Video Grid Layout

CSS

Used CSS for:

- Responsive Design
- Flexbox Layout
- Grid Layout
- Hover Effects
- Modern UI Styling

JavaScript

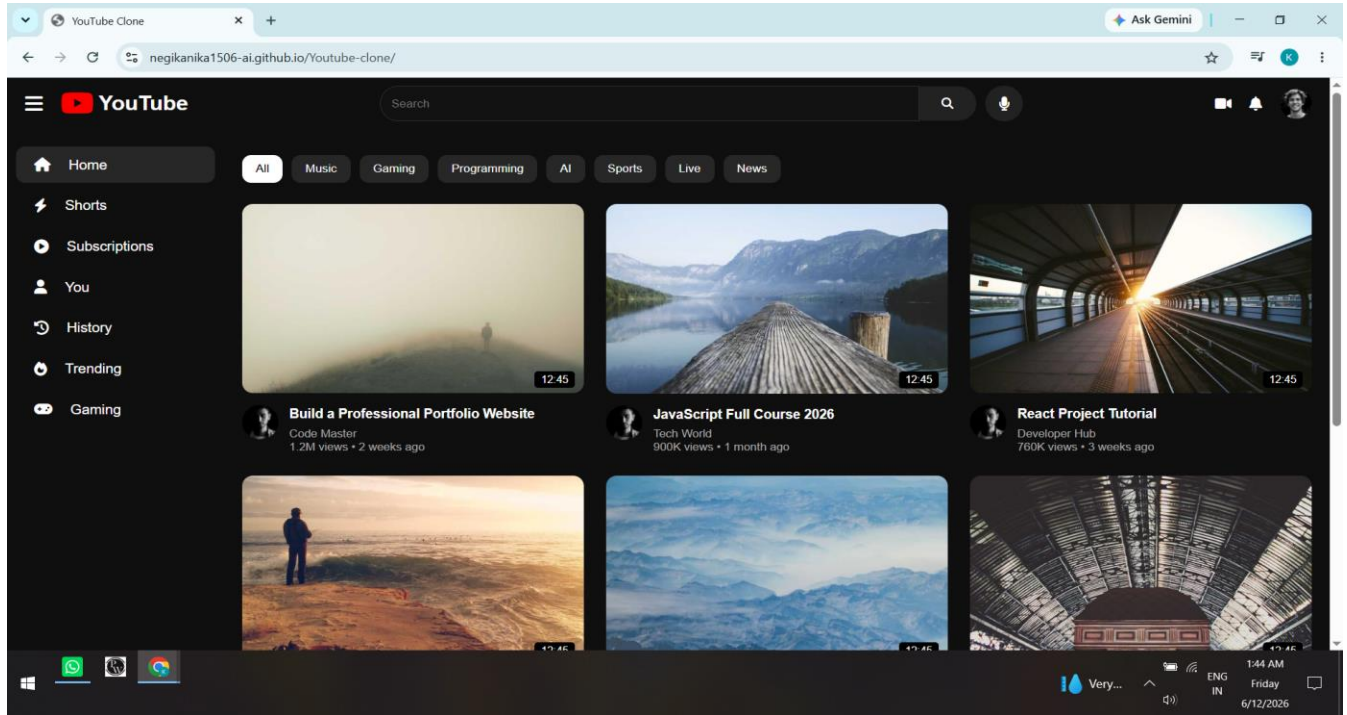

Used JavaScript for:

- Dynamic Video Rendering
- Search Functionality
- Sidebar Toggle

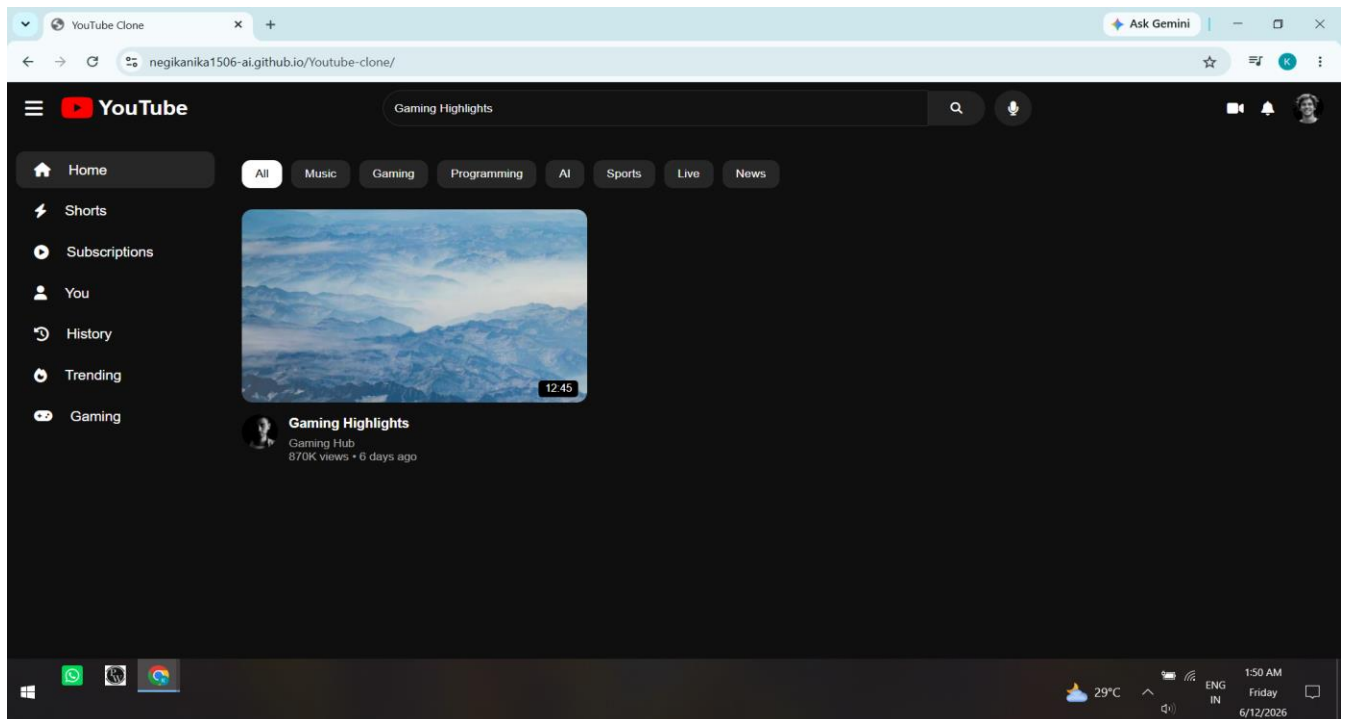

- User Interaction Handling

Screenshots

Conclusion

This project helped me improve my understanding of HTML, CSS, JavaScript, responsive web design, DOM manipulation, and modern frontend development practices. The YouTube Clone successfully replicates the basic appearance and functionality of the YouTube homepage while maintaining responsiveness across different devices.
